The Edisons of Fort Myers Tom Smoot 2011 In 1885, Thomas Edison, age thirty-nine and already a world-famous inventor, met the two great loves of his life: Mina Miller and Fort Myers, Florida. Mina soon became his second wife, and Fort Myers—a remote, almost inaccessible, village on Florida's southwest coast—became their winter home. Other tomes tell the global account of Thomas Edison, the American icon named by Life magazine as the "Man of the Millennium." This book offers a look at his life in his tropical retreat, his "jungle," where for forty-six years he and his bride sought refuge from the cold winters and the demanding lifestyle of his New Jersey home, laboratory, and business complex. While in Fort Myers he watched over his extensive botanical gardens, fished from both his boat and his long dock, interacted with the locals, and labored for many hours in his laboratory. Henry Ford and his family lived nextdoor and many dignitaries came to visit, including President-elect Hoover and Harvey Firestone. The Edisons became an essential part of the Fort Myers story. They made lifelong friendships with townsfolk and joined in local activities until the love affair of the Edisons was cut short by the death of Thomas in 1931. Mina continued to live out her love for Fort Myers and its people until her death in 1947. She gave their winter estate, Seminole Lodge (Thomas's "jungle"), to the grateful citizens of Fort Myers.

Images from the Arsenal of Democracy Charles K. Hyde 2014-03-01 While researching his previous study, Arsenal of Democracy: The American Automobile Industry in World War II (Wayne State University Press, 2013), award-winning automotive historian Charles K. Hyde discovered the many remarkable photos that were part of the era's historical documentation. In Images from the Arsenal of Democracy, Hyde presents a selection of nearly three hundred of these documentary photos in striking black and white, with brief captions. Taken together, the images create a captivating portrait of this crucial moment in American business, military, and cultural history. Images from the Arsenal of Democracy spans from 1940 until the end of the war, presenting up-close, rarely seen views of newly built plants and repurposed production lines, a staggering variety of war products and components, and the many workers behind Detroit's wartime production miracles. The human faces that Hyde presents are especially compelling, as photos show the critical role played by previously underused workers—namely women and African Americans. Images from the Arsenal is divided into chapters by theme, including "Preparing for War before Pearl Harbor"; "Planning Defense Production after Pearl Harbor"; "Aircraft Engines and Propellers"; "Aircraft Components and Complete Aircraft"; "Tanks and Other Armored Vehicles"; "Jeeps, Trucks, and Amphibious Vehicles"; "Guns, Shells, Bullets, and Other War Goods"; "The New Workers"; and "Celebrating the Production Achievements." The first comprehensive and detailed history drawn solely from the surviving photographic record of wartime Detroit, Images from the Arsenal will be appreciated by automotive historians, World War II scholars, and American history buffs.

Motor Vehicle T. K. Garrett 2000-12-18 "As a reference book it has to be classed as one of the best! There should be a copy of it in every college library."

Association of Motor Vehicle Teachers' Newsletter The Motor Vehicle has been an essential reference work for both the student and practising engineer ever since the first edition appeared in 1929. Today it is as indispensable to anyone with a serious interest in vehicle design techniques, systems and construction as it was then.

The current edition has undergone a major revision to include seven new chapters. These include Electric Propulsion; covering all aspects from lead acid and alternative batteries to fuel cells and hybrid vehicles, Static and Dynamic Safety, and Wheels and Tyres. The chapter on the compression ignition engine has been expanded to form three chapters, concentrating on aspects such as common rail injection, recently developed distributor type pumps and electronic control of injection. Automatic, semi-automatic and continuously variable ratio transmissions are covered in two new chapters. A third contains information on the latest developments in computer-aided control over both braking and traction, for improving vehicle stability, while another contains entirely new information on the practice and principles of electrically-actuated power-assisted steering. Also included is coverage of material detailing the latest knowledge and practice relating to safety systems, vehicle integrity, braking systems and much more. The established layout of the book is retained, with topics relating to the Engine, Transmission and Carriage Unit dealt with in turn. Each chapter is well-provided with diagrams, sections, schematics and photographs, all of which contribute to a clear and concise exposition of the material under discussion. Latest extensive revisions to a well-established title New chapters on electric propulsion and vehicle safety.

Internal Combustion Engines Institution of Mechanical Engineers 2011-11-10 This book contains the papers of the Internal Combustion Engines: Performance fuel economy and emissions conference, in the IMechE bi-annual series, held on the 29th and 30th November 2011. The internal combustion engine is produced in tens of millions per year for applications as the power unit of choice in transport and other sectors. It continues to meet both needs and challenges through improvements and innovations in technology and advances from the latest research. These papers set out to meet the challenges of internal combustion engines, which are greater than ever. How can engineers reduce both CO2 emissions and the dependence on oil-derivate fossil fuels? How will they meet the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations? How will technology developments enhance performance and shape the next generation of designs? This conference looks closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. Aimed at anyone with interests in the internal combustion engine and its challenges The papers consider key questions relating to the internal combustion engine
