## UNITS OF CONCENTRATION - Vancouver Island University

WebAssuming the density of water is 1.00 g/mL, 1 liter of solution = 1 kg and hence, 1 mg/L = 1 ppm. This is generally true for freshwater and other dilute aqueous solutions. Parts per million concentrations are essentially mass ratios (solute to solution) x a million (10<sup>6</sup>). In this sense, they are similar to wt %, which could be thought of as ...
