**Biochemische Persönlichkeitsforschung** Karlheinz Schneider-Janessen 2013-03-12 Ist Wissenschaft irrational? Karlheinz Schneider-Janessen hat diese Frage für die biologisch orientierte Psychiatrie mit einem klaren Ja beantwortet. In den anderen Wissenschaften ist es zwar ebenso. Doch verschärft sich dieses Problem in der Medizin. Denn aus unreifen wissenschaftlichen Vorstellungen sind im letzten Jahrhundert oft allzu rasch falsche therapeutische Konsequenzen gezogen worden. Und dies geschieht - so ist zu befürchten - auch heute noch. Ein sehr kritisches, manchmal auch böses, aber doch notwendiges Buch. Ein Schmunzelbuch für jeden Wissenschafts-Skeptiker. Ein Lesebuch für Wissenschaftler allemal.

*Security and Usability* Lorrie Faith Cranor 2005-08-25 Human factors and usability issues have traditionally played a limited role in security research and secure systems development. Security experts have largely ignored usability issues--both because they often failed to recognize the importance of human factors and because they lacked the expertise to address them. But there is a growing recognition that today's security problems can be solved only by addressing issues of usability and human factors. Increasingly, well-publicized security breaches are attributed to human errors that might have been prevented through more usable software. Indeed, the world's future cyber-security depends upon the deployment of security technology that can be broadly used by untrained computer users. Still, many people believe there is an inherent tradeoff between computer security and usability. It's true that a computer without passwords is usable, but not very secure. A computer that makes you authenticate every five minutes with a password and a fresh drop of blood might be very secure, but nobody would use it. Clearly, people need computers, and if they can't use one that's secure, they'll use one that isn't. Unfortunately, unsecured systems aren't usable for long, either. They get hacked, compromised, and otherwise rendered useless. There is increasing agreement that we need to design secure systems that people can actually use, but less agreement about how to reach this goal. Security & Usability is the first book-length work describing the current state of the art in this emerging field. Edited by security experts Dr. Lorrie Faith Cranor and Dr. Simson Garfinkel, and authored by cutting-edge security and human-computerinteraction (HCI) researchers world-wide, this volume is expected to become both a classic reference and an inspiration for future research. Security & Usability groups 34 essays into six parts: Realigning Usability and Security---with careful attention to user-centered design principles, security and usability can be synergistic. Authentication Mechanisms-- techniques for identifying and authenticating computer users. Secure Systems--how system software can deliver or destroy a secure user experience. Privacy and Anonymity Systems--methods for allowing people to control the release of personal information. Commercializing Usability: The Vendor Perspective--specific experiences of security and software vendors (e.g.,IBM, Microsoft, Lotus, Firefox, and Zone Labs) in addressing usability. The Classics--groundbreaking papers that sparked the field of security and usability. This book is expected to start an avalanche of discussion, new ideas, and further advances in this important field.

Wasted Ankur Bisen 2019-08-22 PRAISE FOR WASTED 'This book enhances our understanding of the historical issues that have plagued India's sanitation challenge. A must read for those who are interested in the important agenda of a clean environment for all' NAINA LAL KIDWAI, Chair, India-Sanitation Coalition 'Despite the clarion call by our Prime Minister, Indian society still lacks clarity on the nature of the desirable solution for sanitation. Wasted is a serious attempt at pointing out possibilities and solutions. Written lucidly and in a narrative style; it provides an inspiring peek of a clean future. A much-needed book for our times' DR RAJIV KUMAR, Vice Chairman, Niti Aayog 'Wasted advocates that the handling of waste in India requires the finest management and developmental architecture. The book remarkably delves into the depth and breadth of the problem of yesterday and today and presents it as a free-flowing storytelling' MARTIN MACWAN, Dalit human rights activist 'Wasted locates India's missed opportunities in sanitation in its complex civilizational legacy; its comfort with caste, informality and child labour; and in its appalling local governance systems. Necessary reading for every policy maker, town planner and engaged urban citizen.' HARSH MANDER, author and activist 'Wasted addresses India's complex caste-driven perception of waste. It traces the illogic of our constant discontent with modes of disposal, while being deliberately blind to socio-political processes behind its creation. This book must be read by all concerned Indians' ARUNA ROY, socio-political activist and Magsaysay Award winner (2000) 'India is not working on the science needed towards the management of pollution that it emits in the name of development. Therefore, even well-intentioned projects do not yield results. This book can be an entry point to understanding the process to reduce use of nature and to rejuvenate nature for our sustainable future' DR RAJENDRA SINGH, environmentalist and Magsaysay Award winner (2001) ABOUT THE BOOK Urban India generates close to 3 million trucks of untreated garbage every day. If these were laid end-to-end, one could reach half way to the moon. The need for attention to sanitation and cleanliness is both urgent and long-term. This book takes an honest look into India's perpetual struggle with these issues and suggests measures to overcome them. Historically, we have developed into a society with a skewed mindset towards sanitation with our caste system and non-accountability towards sanitation. Through stories, anecdotes and analysis of events, this book seeks solutions to the current entangled problems of urban planning, governance and legislation, and institutional and human capacity building. Wasted traces interesting relationships between urban planning and dirty cities in India; legislative and governance lacunae and the rising height of open landfills; the informality of waste management methods, and the degrading health of Indian rivers, soil and air. Arguing that all current solutions of India are extrapolated from these flawed beliefs and structures and are therefore woefully inadequate, Bisen draws a benchmark from clean countries of today. Underlining the need for inclusive human clusters, specificity in legislation, correction of existing social contracts and governance frameworks, creating a formal resource recovery industry in India, and the pursuit of diplomacy around this industry, this book shows how these solutions could lead us towards a brighter future and better social development.

Causality assessment of an adverse event following immunization (AEFI) 2019-12-04 Since the 2013 publication of the "Causality assessment of an adverse event following immunization (AEFI), user manual for the revised WHO classification", there has been extensive global interest in adopting the new revised causality assessment methodology for vaccine pharmacovigilance systems. WHO provided technical support and helped build capacity in countries of all WHO Regions who wanted to use the revised methodology. Recently, the new methodology has been scientifically evaluated. In April 2017, WHO coordinated an India - Zimbabwe project entitled "Inter-country study to assess the inter-rater reliability of the WHO AEFI causality assessment methodology and the utility of the new WHO AEFI causality assessment software". The quantitative aspect of the study determined that there was realistic agreement between assessors in their findings. The qualitative aspect of the study identified areas of the methodology that could be made even more robust by the use of more accurate and clearer language, semantics and graphics. In the meanwhile, feedback from surveillance systems and other research studies have shed new evidence on areas such as, "substandard and falsified vaccines", "immunization anxiety" and "immunization stress-related responses" that need to be incorporated into new guidance documents.
