Levich 2012-12-06 Ratings, Rating Agencies and the Global Financial System brings together the research of economists at New York University and the University of Maryland, along with those from the private sector, government bodies, and other universities. The first section of the volume focuses on the historical origins of the credit rating business and its present day industrial organization structure. The second section presents several empirical studies crafted largely around individual firm-level or bank-level data. These studies examine (a) the relationship between ratings and the default and recovery experience of corporate borrowers, (b) the comparability of credit ratings made by domestic and foreign rating agencies, and (c) the usefulness of financial market indicators for rating banks, among other topics. In the third section, the record of sovereign credit ratings in predicting financial crises and the reaction of financial markets to changes in credit ratings is examined. The final section of the volume emphasizes policy issues now facing regulators and credit rating agencies.

Capitalism Richard Smallbach 2014-07-15 Capitalism is first and foremost an economic system that prizes free and competitive markets, private ownership, and a comparatively small role for government intervention and regulation. Yet capitalism also has many political undertones and has become associated with notions of freedom, individualism, self-determination, and anti-unionism. As a political and economic philosophy, it was a major player in the Cold War, squaring off against communism and seemingly triumphing. The colorful history of this economic system that doubles as a political philosophy is recounted here, from Medieval-era experiments in agrarian capitalism and mercantilism to the 21st century digital economy and bitcoins. This is a fascinating and provocative read and an immersive journey through the political and economic history of the modern world.
