Detroit's Michigan Central Station Kelli B. Kavanaugh 2001 In 1913, the Michigan Central Station opened its majestic entrances to the people of Detroit. Designed by Warren & Wetmore and Reed & Stern, the firms also noted as the architects of the Grand Central Station in New York City, the depot was a marvel of grandeur and comfort for the traveler lucky enough to utilize its facilities. Soldiers went to war, families both separated and rejoined, and folks looking for an honest living in the Motor City all walked the Michigan Central's elegant corridors. Since the last train pulled away from the station in 1988, the structure has fallen prey to rapidly paced deterioration. Detroit's Michigan Central Station captures the glory of the Michigan Central and its environs. Using photographs from the Burton Historical Collection, as well as private collections, the book illustrates the use of the Michigan Central Station by a city whose story dramatically parallels that of this magnificent structure. The book also includes imagined futures of the station from some of the many people who have been inspired by the magic this grand building continues to exude.

Inclusive Urban Design: Public Toilets Clara Greed 2007-06-01 This is a unique text providing both design guidance and policy direction for the provision and design of public toilets covering city-wide, district-level and site-specific principles. It highlights the role of urban design in reversing the trend of inadequate toilet provision, and sets out guidelines for design which meets both user need and provider requirements. Greed presents the fundamental principle that toilets should not be dealt with in isolation from mainstream urban policy, but that they should be seen as a serious core component in both strategic urban policy and local area design. She argues toilets are valuable townscape features in their own right as manifestation civic pride and good urban design - essential architectural components which add to the quality and viability of an area. Although a range of design guidance on toilets exists there is still considerable dissatisfaction with the end product in terms of building design, levels of provision, location, safety, layout, DDA requirements and accessibility. By outlining user demands and provider constraints, Greed shows that it is essential for architects to have an informed understanding and practical knowledge of toilet issues when working with public and private sector providers. Examples of toilet architecture from other countries, and policies from different cultural settings, are included for comparative purposes to invigorate UK perspectives. Industrial Equipment News 1975
